Discover your skin's beauty

Gentle Pro™ Family

Solutions for
common aesthetic concerns

Discover your skin's true beauty with the GentlePro™ Family

Vascular lesions can be present from birth or develop with age, or occur as the result of sun damage. They occur when the small capillaries in the skin become dilated and can give the appearance of red spots, or sometimes large stains, such as port wine stains. They can also spread out like thread veins or spider veins.

Pigmented lesions are extremely common and most often caused by the sun. They include freckles, age spots and liver spots and normally contain high concentrations of melanin (pigment). Hormonal factors, injury and aging can also cause abnormal pigmented lesions.

The GentlePro™ Family is a dual wavelength laser platform that combines the fastest and most powerful 755 nm Alexandrite laser with the Nd:YAG 1064 nm laser for high performance treatment capabilities in terms of speed, efficacy, ease-of-use, outstanding performance, safety and patient satisfaction. The Gentle Pro™ Family delivers a range of treatments for all skin type hair removal, as well as pigmented and vascular lesions.

Achieving a fresher, clearer skin is now easier than ever with the GentlePro™ Family.

Treatments for vascular and pigmented lesions

What are the treatments like?

The secret lies in the laser technology that delivers an intense, but gentle burst of energy onto targeted areas of the skin, delivering a controlled amount of therapeutic heat to the targeted area with proven and effective results.

Are the treatments comfortable?

Gentle Pro Family uses a patented Dynamic Cooling Device™ (DCD), which prepares the skin for treatment by spraying the upper layer with a cooling burst of cryogen in adjustable durations - milliseconds before the laser pulse. DCD helps ensure that the Gentle Pro Family treatments are as comfortable as they are effective.

Can all skin types be safely treated?

With the Gentle Pro Family, the combination of the fastest and most powerful 755 nm Alexandrite laser with the ND:YAG 1064 nm laser for high performance treatment capabilities has created a device that provides excellent results for all skin types.

How long do treatments take, and how many treatments will I require?

Treatment times may vary depending on your specific needs. The number of treatments required will be based on your body area and skin tone.

What precautions should I take?

Skin should be clean-shaven and thoroughly cleansed before laser treatment. It is important not to expose the intended treatment area to sunlight or tanning booth light prior to or immediately after treatment.

Leader in vascular and pigmented lesion treatments

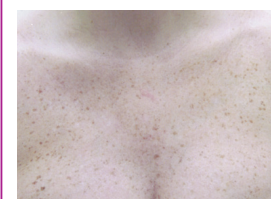

The leading treatment method.

Safe and comfortable. Minimal downtime.

Restoring a fresher, clearer skin texture
